ERICA Product Details

Roche KJ, T Schulthess, M Eisenbach, T Maier, G Alvarez, PC Lichtner, RT Mills, G Hammond, J Candy, and MR Fahey. 2008. *FY 2008 US OMB PMM DOE SC OASCR Software Metric SC GG 3.1/2.5.2: Improve Computational Science Capabilities* . PNNL-24606, Pacific Northwest National Laboratory, Richland, WA.

Title:	**FY 2008 US OMB PMM DOE SC OASCR Software Metric SC GG 3.1/2.5.2: Improve Computational Science Capabilities**
Contributors (Name, Email, Institution)	Kenneth J Roche (BATTELLE (PACIFIC NW LAB)), Thomas Schulthess (Oak Ridge National Laboratory), Markus Eisenbach (Oak Ridge National Laboratory), Thomas Maier (Oak Ridge National Laboratory), Gonzalo Alvarez (Oak Ridge National Laboratory), Peter C Lichtner (Los Alamos National Laboratory), Richard T Mills (OAK RIDGE NATIONAL LAB), Glenn Hammond (Sandia National Laboratory), Jeff Candy (General Atomics) and Mark R Fahey (Oak Ridge National Laboratory)
Responsible Author:	Roche, Ken
Product Type:	Formal Report (Technical Report)
Description:	The report presents the problems and work conducted to satisfy the Department of Energy's (DOE) Office of Advanced Scientific Computing Reasearch (ASCR) program's FY08 software effectiveness measure, part of it's annual Office of Management and Budget (OMB) program goal entered into DOE's Performance Measure Manager (PMM) system at the end of the FY, for the following science and engineering applications: DCA++ (Dynamical Cluster Approximation (DCA) with the Hirsch-Fye quantum Monte Carlo (QMC) (HF-QMC) algorithm applied to Hubbard model and used to investigate models of cuprates that include disorder to analyze physical effects contributing to the behavior of high-Tc superconductors), GYRO (solves the gyrokinetic-Maxwell

	equations for combining long-wavelength, low-frequency turbulence driven by ion-scale instabilities with the short-wavelength, high-frequency turbulence driven by electron-scale instabilities in tokamak devices), and PFLOTRAN (code to simulate in 3+1D complex multiphase flow and multicomponent reactive transport; used here to study the Hanford 300 area).
Funding Source(s):	Project No: 58202 B&R No: KJ0402000 Project Title: Software Effectiveness Metrics Product Line: Physical and Computational Sciences
Limited Distribution:	No
OSTI Announcement:	No
Keywords:	metrics; software effectiveness; parallel computing; applied computer science; computational science
EMSL Use(s)	N/A
ARM User:	No
RPL User:	No
Comments:	The report was submitted October 10, 2008, and accepted at DOE headquarters on October 31, 2008. A summary report accompanies the main report.
Information Release Number:	PNNL-24606
Information Release Status List:	Published 10/10/2008, Cleared 08/25/2015,
Record Date:	08/25/2015
Last Submitted/Updated By:	Kubik, Michelle R
